Devices to be registered and how?

FinSpine. "Practical examples from Finland"

Stockholm 9th November, 2023

Liisa Pekkanen, MD, PhD, Head of department

Chair of FinSpine Task force

Chief physician of the spine registry, Finnish Institute for Health and Welfare

FinSpine

- Since 2017
 - Hospitals have joined 2017-2023
- 2023: statutory
 - under controller liability of THL by a decree of the Ministry of Health
 - THL = Finnish Institute for Health and Welfare
- Permanent government funding
- Coverage: 21 / 22 public hospitals and 1 / 4 private hospitals
- 90% of the annual amount of spine procedures are in the registry
- 100 % of the procedures are identified and entered automatically
 - data by the surgeons 80 %
- Patients: 60 % baseline
 - Best hospitals 90 %

FinSpine: current status of implants in the registry

- minimun data set: no implants
- multiple information systems in hospitals
 - Mostly implants in containers without UDI
 - file only brand and size; code for each size
 - Some brands with container implants are marked with UDI

- Used to supplement the stock
- Invoicing
- "dead end" = no integration between systems
- Only 1 hospital
 - integration btw the medical information system of the operative department and the registry

MDR – requirements of manufacturers_{1st and 2nd working meeting}

of spine registries 2023

GOOD QUALITY DATA

- Social security number unique for each patient in the nordic countries
- Coverage / completeness / hospitals / patients / information systems
- "It is easy to pay for data with high quality."
 - Joshua Bridgens, 2023
- Manufacturers need implant level data (UDI)
- Data available to the industry "raw or via good quality reports"
- Patient data
 - PROM

FinSpine in the near future

- Implants to become a part of the minimum national data set
 - FinSpine can develope an own system to register implants
 - FinSpine can investigate current status of systems already in use
- Implant level data (UDI)
 - barcode
- Follow-up of an implant over the whole device lifetime (10 years) is not a problem
 - Timepoints up to 10 years
- FinSpine sees the co-operation with international spine registry group and industry very important
 - And we are ready for that!

Thank you!
